SUMMARY

Full-stack web developer skilled in modern front-end frameworks, scalable backend systems, and cloud infrastructure. Focused on performance, security, and maintainability in building user-friendly applications.

Languages: JavaScript/TypeScript, Python, SQL, HTML/CSS/TailwindCSS, Visual Basic/VBA

Frameworks: React, Next.js, Vite, AWS (Amplify, DynamoDB, API Gateway, Lambda), Three.js, GSAP

Developer Tools: Git, Docker, GitHub Actions, CI/CD Pipelines

EXPERIENCE

International Child Art Foundation

Washington, D.C.

Lead Developer

September 2023 – Present

- Engineered backend systems and APIs optimized for minimal data transmission, leveraging caching strategies with Next.js and AWS to enhance responsiveness and reduce operational costs
- Led end-to-end development workflows, adapting to evolving project requirements, optimizing legacy systems, and delivering regular high-quality updates to production
- Designed and implemented scalable, efficient databases tailored to website needs
- Implemented OWASP security best practices, including HttpOnly, Secure cookies, and CSRF protection, to safeguard user data and prevent XSS, session hijacking, and other web vulnerabilities

Developer Productivity Engineer

September 2023 – Present

- Interviewed, evaluated, and onboarded developer interns, assigning roles, providing GitHub access, AWS accounts, and necessary resources for project involvement
- Provided developers with clear direction and ongoing support, addressing workflow, code design, and best practices to ensure efficient contributions
- Improved codebase quality by analyzing GitHub pull requests, identifying issues, and implementing actionable solutions to maintain project standards

Web Systems Reliability Lead

August 2023 – Present

- Developed and managed updates for ICAF websites, ensuring high-quality releases with minimal downtime
- Ensured database integrity and consistency across multiple website infrastructures, leveraging custom scripts to prevent stale caches and deployment errors
- Designed and implemented automated deployment workflows using GitHub Actions and AWS to streamline website updates and ensure seamless integration

PROJECTS

MyFavoriteSport Art Competition | AWS, Typescript, Next.js, Git

September 2023 – July 2024

- Formed and led a team of developers to administer an international art competition for children
- Led the development of a full-stack web application using AWS, Next.js, React, Typescript, and Stripe
- Coordinated biweekly meetings with a team of web designers to uphold industry-standard UI/UX practices

Puzzlr | Javascript, Three.js, Object-Oriented Programming

February 2023 – July 2023

- Developed an immersive 3D puzzle game using Three.js, allowing users to generate and solve puzzles from uploaded images, URLs, or preloaded selections in a dynamic 3D environment
- Created and adapted algorithms for puzzle generation, including a custom "Divided Squares" method and integration of Voronoi diagrams, programmatically generating SVG-based puzzle pieces with unique shapes
- Designed custom 3D assets and soundscapes, learning Blender for modeling and Ableton for dynamic audio feedback, enhancing the game's visual and auditory experience

EDUCATION

Virginia Polytechnic Institute and State University

Blacksburg, VA

Bachelor of Science, Business Information Technology

Aug. 2015 – December 2018

- Focus on Decision Support Systems
