SUMMARY

Full-stack developer experienced in building websites, designing APIs, leading teams of volunteer developers, and managing cloud infrastructure.

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS, VBA

Frontend: React, Next.js, TailwindCSS, Three.js, GSAP, Vite, Responsive Design

Backend & Cloud: AWS (Lambda, DynamoDB, API Gateway, S3, CloudFront, Cognito, Amplify, Route53, CloudWatch), Serverless Architecture, REST APIs, Stripe

DevOps & Tools: Git, GitHub Actions, CI/CD Pipelines, Docker, FFmpeg, ImageMagick

EXPERIENCE

International Child Art Foundation

Washington, D.C.

Lead Developer

September 2023 – Present

- Architected and led development of a full-stack web application (React frontend, cloud-hosted API and database) serving an international art competition for children
- Created a serverless backend hosted with AWS to authenticate users, receive and process artworks for efficient storage and transmission, and serve our gallery
- Integrated Stripe payment processing using webhooks to instantly authorize users for artwork submission
- Built a Lambda-based image upload handler leveraging FFmpeg to generate multiple image sizes and formats, reducing total data egress costs by over 80%
- Researched and implemented OWASP best practices regarding HTTPOnly/Secure cookies and CSRF protection using a custom, Lambda-based user authentication flow
- Created CI/CD workflows using GitHub Actions to automatically build and deploy artifacts over SFTP pipelines to production and staging environments
- Designed Lambda functions to autonomously monitor cloud resource usage and prevent overspend

Developer Productivity Engineer

September 2023 – Present

- Recruited, onboarded, and mentored volunteer developers, serving as the point of contact for guidance in completion of software development tasks
- Assigned tasks and reviewed Pull Requests to ensure adherence to organizational quality standards
- Led cross-functional biweekly design meetings to maintain adherence to design standards for webpage implementation

Web Systems & Reliability

August 2023 – Present

- Reduced central website front page data transmission by 95%, massively reducing time spent loading for new users
- Migrated legacy website to modern React-based frontend infrastructure and CI/CD pipeline, reducing time spent deploying by 90% and eliminating stale cache errors
- Created and managed our primary Google Ad campaign integrated with Google Analytics and wrote code to track user conversions across sites, achieving an 11% CTR

PROJECTS

Puzzlr | JavaScript, Three.js, Object-Oriented Programming

February 2023 – July 2023

- Developed a web-based 3D puzzle game allowing users to submit images to solve as puzzles
- Adapted Voronoi-based partitioning and created custom algorithms for real-time puzzle piece generation for arbitrary images
- Designed custom 3D assets using Blender and sounds using Ableton to create an immersive gameplay experience

Automated Video Pipeline | Python, Raspberry Pi, Bash, FFmpeg, ImageMagick

May 2021 – September 2021

- Built an autonomous video processing pipeline which uses OCR and pixel sampling to digest raw livestreams into highlight reels, automatically uploading them to YouTube via API

EDUCATION

Virginia Polytechnic Institute and State University

Blacksburg, VA

Bachelor of Science, Business Information Technology

Aug. 2015 – December 2018

- Concentration in computer-based decision support systems: database management and data interpretation, web-based CRUD apps, visual interface design
